Profile:

I decided to change my career after working for several years in sales. I was always used to work with computers, but just a few months ago I discovered, that I understand programming and I like it. I believe, that I can use my analytical and logical thinking in IT better, than in sales. So for now, I am a beginning programmer. I am working on myself and I am guided by an experienced mentor. Last month I created a logical game app with AI and multiplayer. I am now working on an app for personal finance management. If you want to learn more, you can visit my website: davidj.online
